

AUDITVERSE.AI

The audit platform that actually ships findings.

One workspace for the audit lifecycle — universe to engagement, workpaper to finding, escalation to closure.

Client Briefing · May 2026

THE PROBLEM

Internal audit runs on email, spreadsheets, and stale memory.

Three groups feel the pain — and they don't see the same version of the truth.

EXECUTIVES

No real-time view of audit coverage, open risks or remediation status.

- Last quarter's deck is the only artifact
- Audit committee learns of issues 60+ days late
- Assurance gaps invisible until something breaks

AUDIT TEAM

Spend 60% of cycle time copy-pasting between Word, Excel and email.

- Workpaper review threads buried in inbox
- No standard CCCE structure across findings
- Skill-to-engagement matching done in heads

BUSINESS / IT

Repeated requests for the same evidence, no visibility into status.

- Same control re-audited from 3 angles
- Action owners chase audit for due dates
- No self-service to attest or push back

THE SOLUTION

Seventeen modules. One workspace. The full audit lifecycle.

Each module is on the next slide. Here is the map.

01 Universe	02 Plans	03 Engagements	04 Workpapers	05 Findings	06 Issues
07 Surveys	08 Documents	09 Analytics	10 Portal	11 Charter	12 CCM
13 Reporting	14 QAIP	15 Test Scripts	16 Skill Matrix	17 Capacity	

Audit Universe

Risk-rated map of every auditable entity, refreshed continuously.

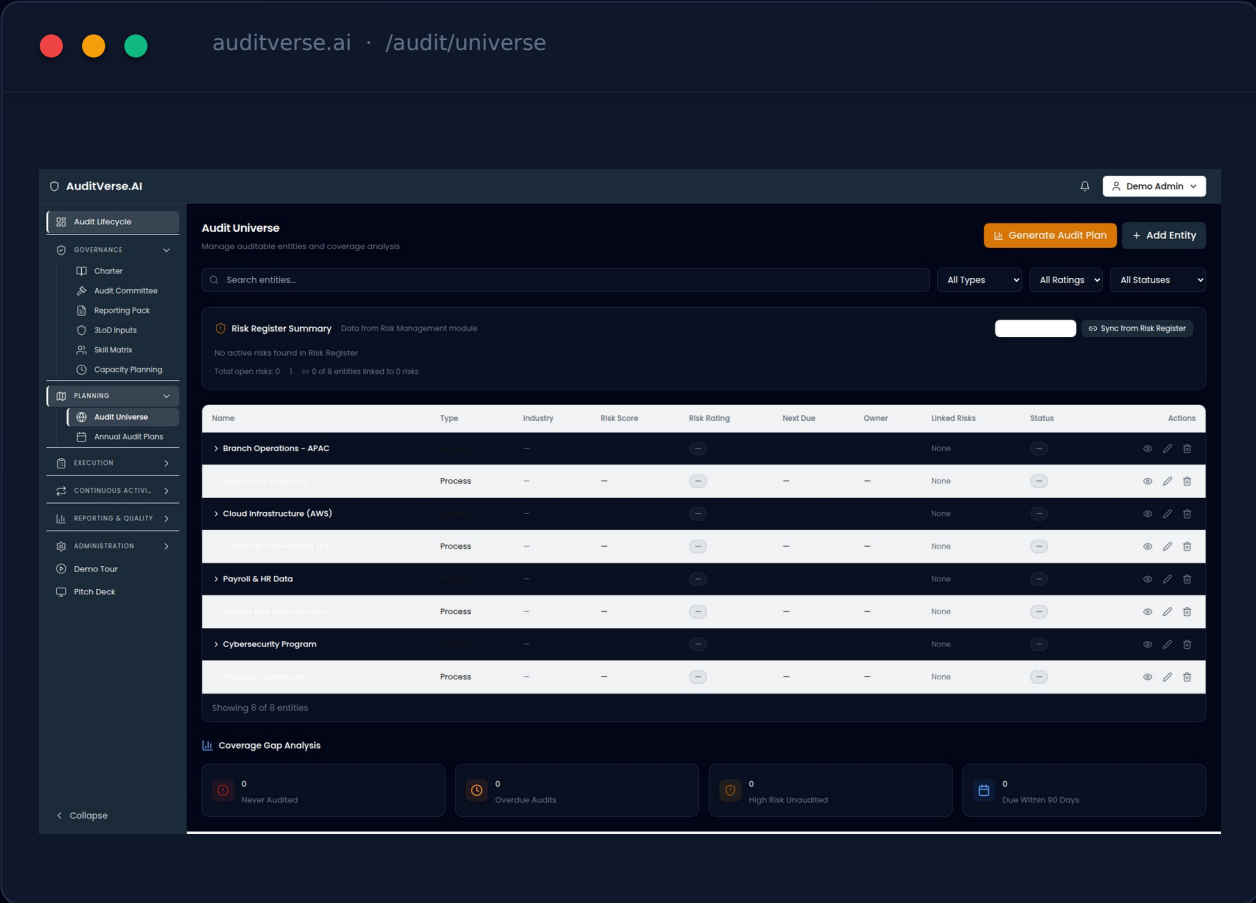

TODAY

Auditable entities live in spreadsheets that are out of date the moment they're shared. Coverage gaps are invisible until the audit committee asks.

WITH AUDITVERSE.AI

Universe gives executives a live heat map across business units, scored for inherent risk and last-audited recency. Assurance gaps surface automatically.

- Tag entities by BU, geography, regulation
- Inherent + residual risk scoring
- Coverage delta vs. last 12/24/36 months
- Drill from heatmap to engagement

Audit Plans

Risk-based annual planning, not a calendar exercise.

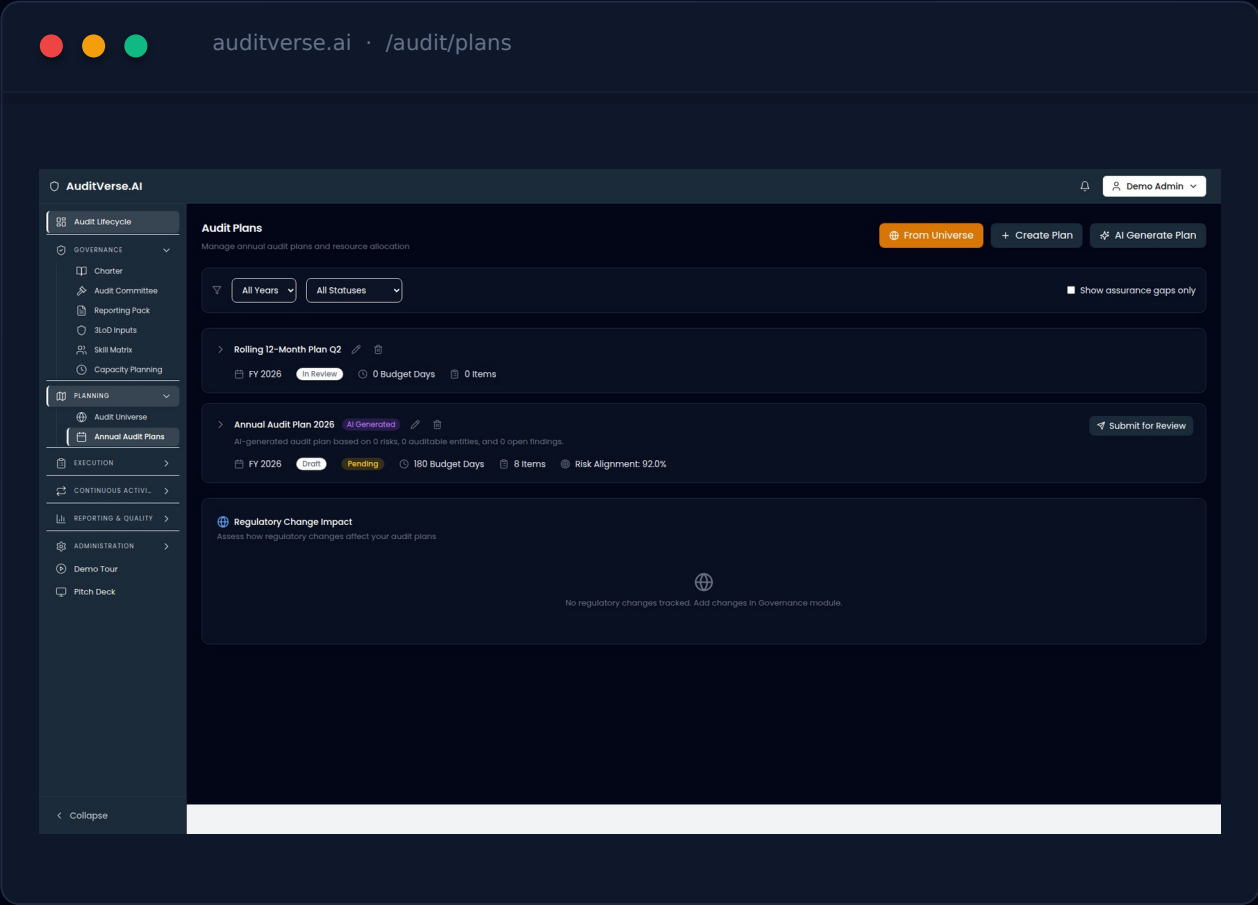

TODAY

Annual plans get built in Excel, then drift the moment Q1 starts. There's no traceability from a plan slot back to the risk that justified it.

WITH AUDITVERSE.AI

Plans turns the universe into a multi-year, risk-weighted schedule with budgeted hours, dependencies, and live status for every engagement slot.

- Multi-year and rolling-12 views
- Auto-suggest from universe risk score
- Hours budgeted vs. capacity available
- Approval workflow with audit committee

Engagements

Run every engagement to one consistent shape.

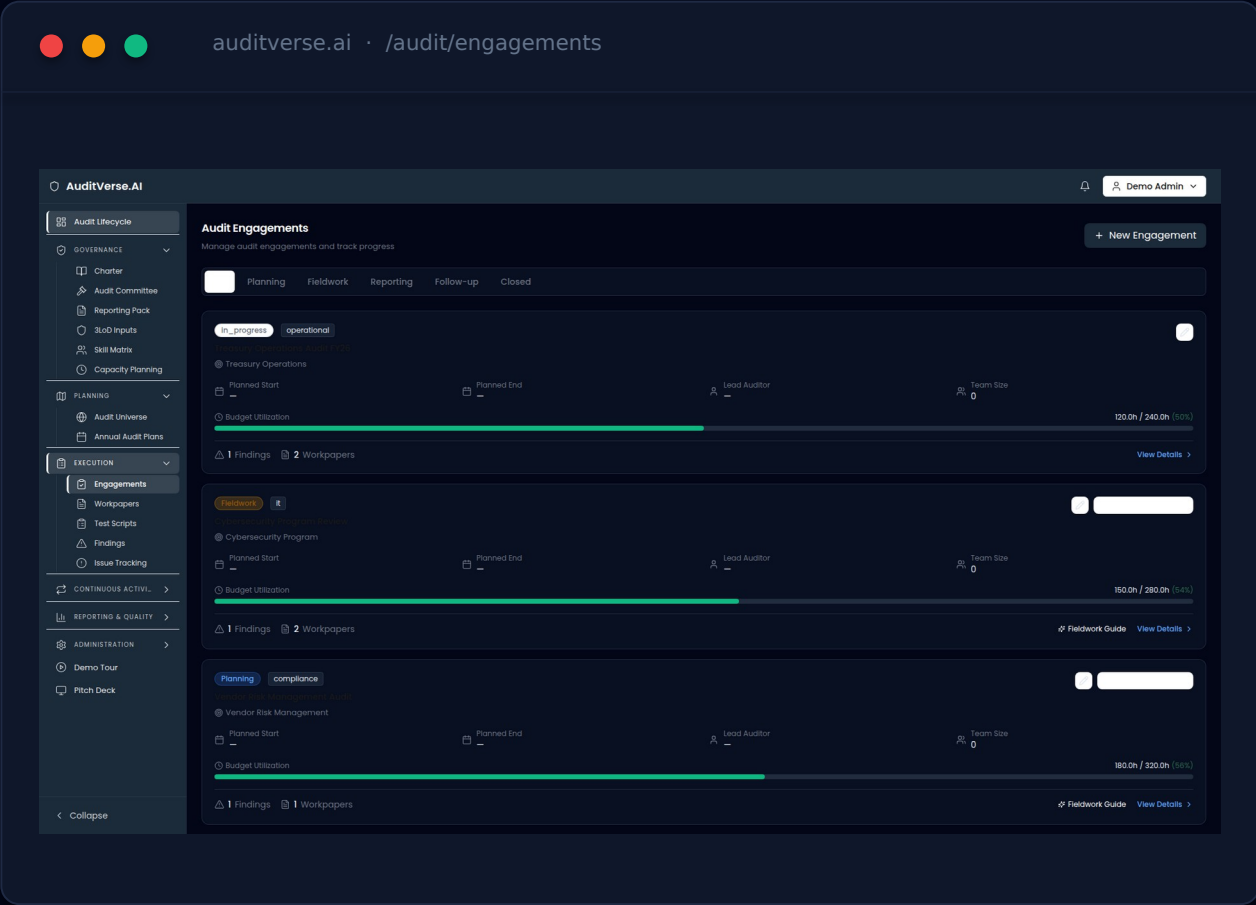

TODAY

Each lead auditor structures engagements differently. Reviewers can't tell, slot-to-slot, where time is being burned or where scope quietly grew.

WITH AUDITVERSE.AI

Engagements gives every audit a standard scope, objectives, milestones, hours and team — with AI scope-drafting from the universe entry.

- AI-drafted scope from entity context
- Budget vs. actual hours, live
- Standard milestones + workpaper structure
- Assurance gap badges from universe

Workpapers & Sign-Off

Test procedures, evidence and review trail in one place.

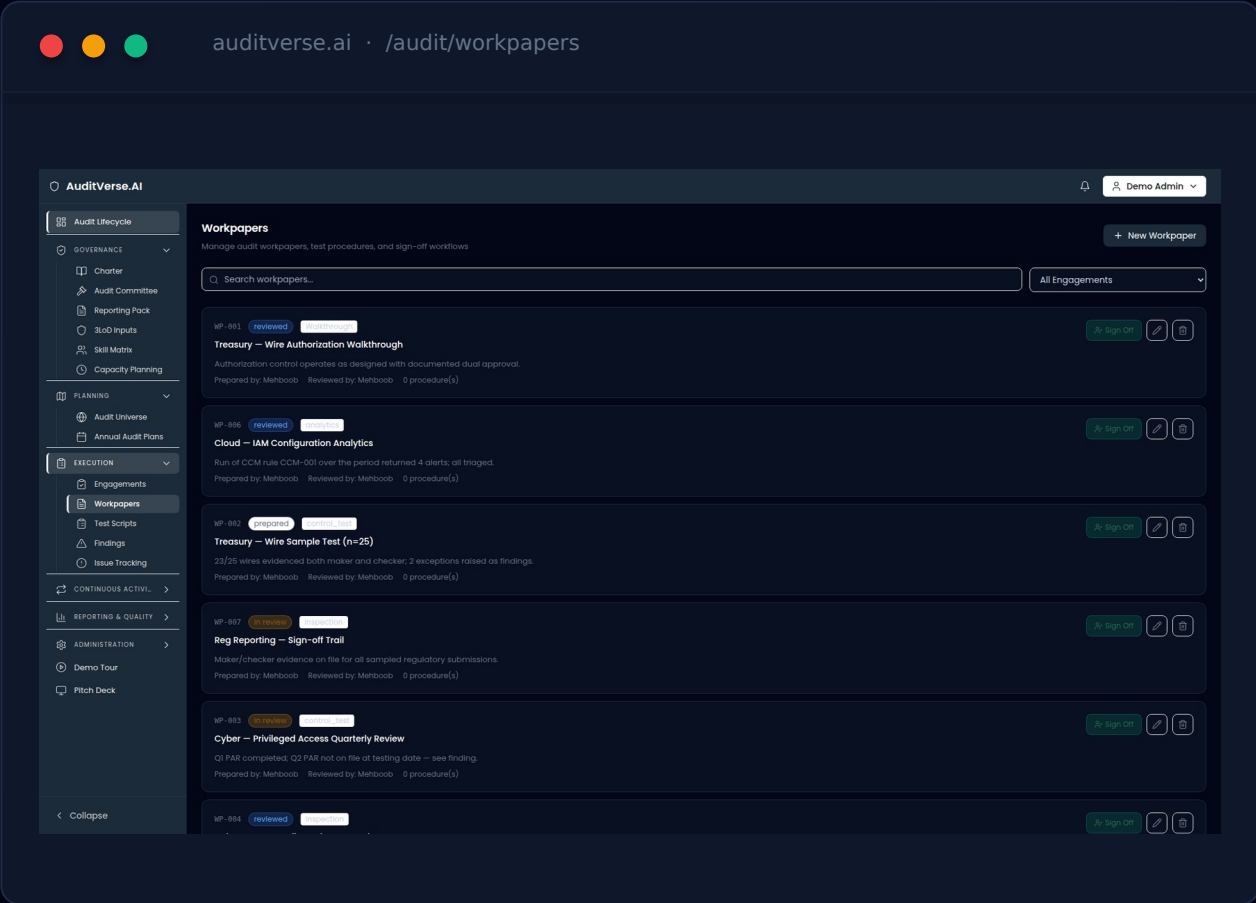

TODAY

Workpapers live in Word, evidence in shared drives, review notes in email. Reconstructing what happened months later is forensic work.

WITH AUDITVERSE.AI

Workpapers structures every test (planning, walkthrough, analytical, interview) with a 4-stage sign-off chain: prepare → review → lead sign-off → close.

- Standard procedure templates
- Inline evidence + cross-reference
- Preparer / reviewer / lead signatures
- Reject-and-return with notes

FINDINGS

Findings

Every finding written to the same CCCE structure.

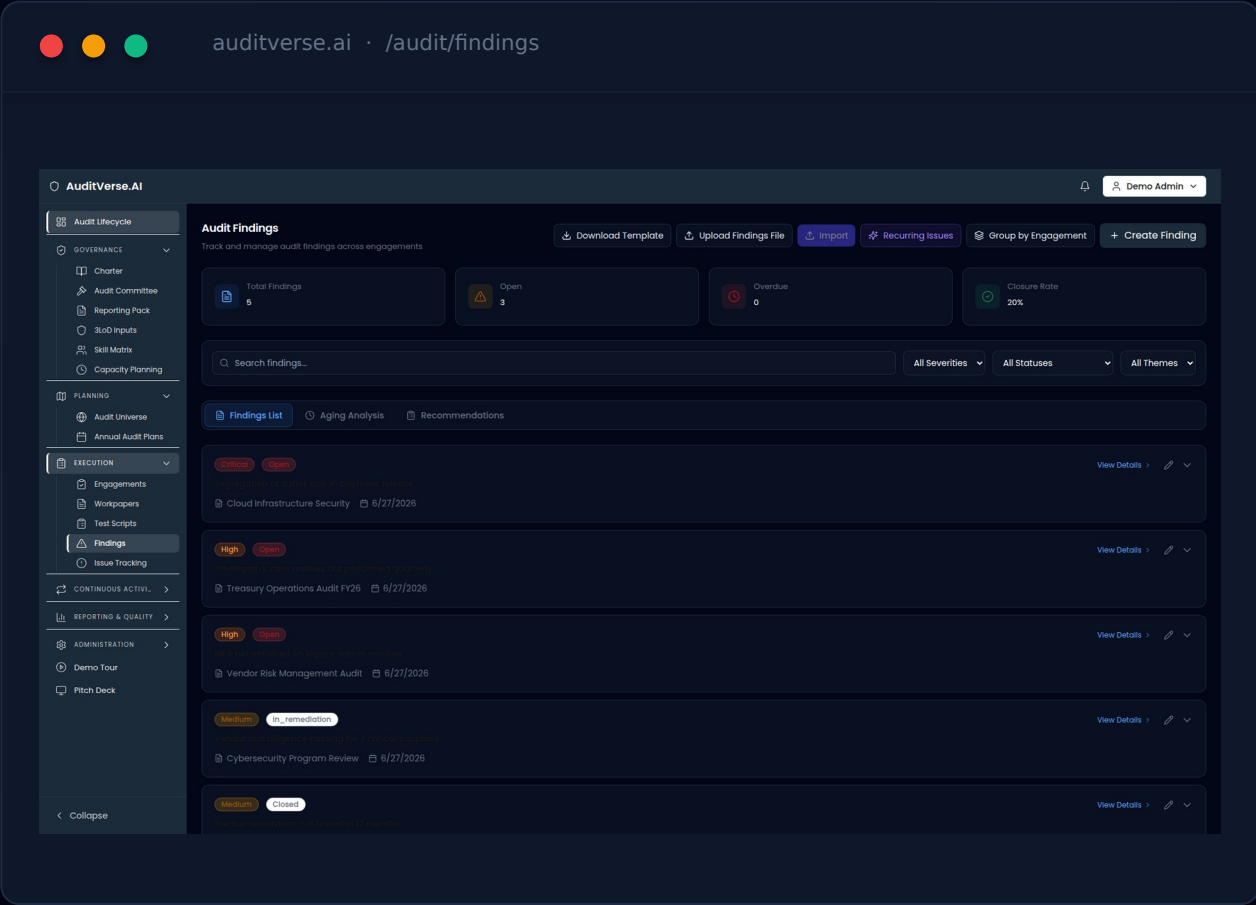

TODAY

Findings get rewritten by every reviewer because there's no shared template. Severity ratings drift between auditors. Recurring issues go undetected.

WITH AUDITVERSE.AI

Findings enforces the IIA-aligned CCCE structure (Condition, Criteria, Cause, Effect), with AI-drafted condition statements and severity calibration.

- AI-drafted CCCE from anomaly description
- Severity calibration across the team
- Similar / recurring detection across years
- Bulk import + Excel template

ISSUES

Issue Tracking & Escalation

No more 'we'll chase that one next month'.

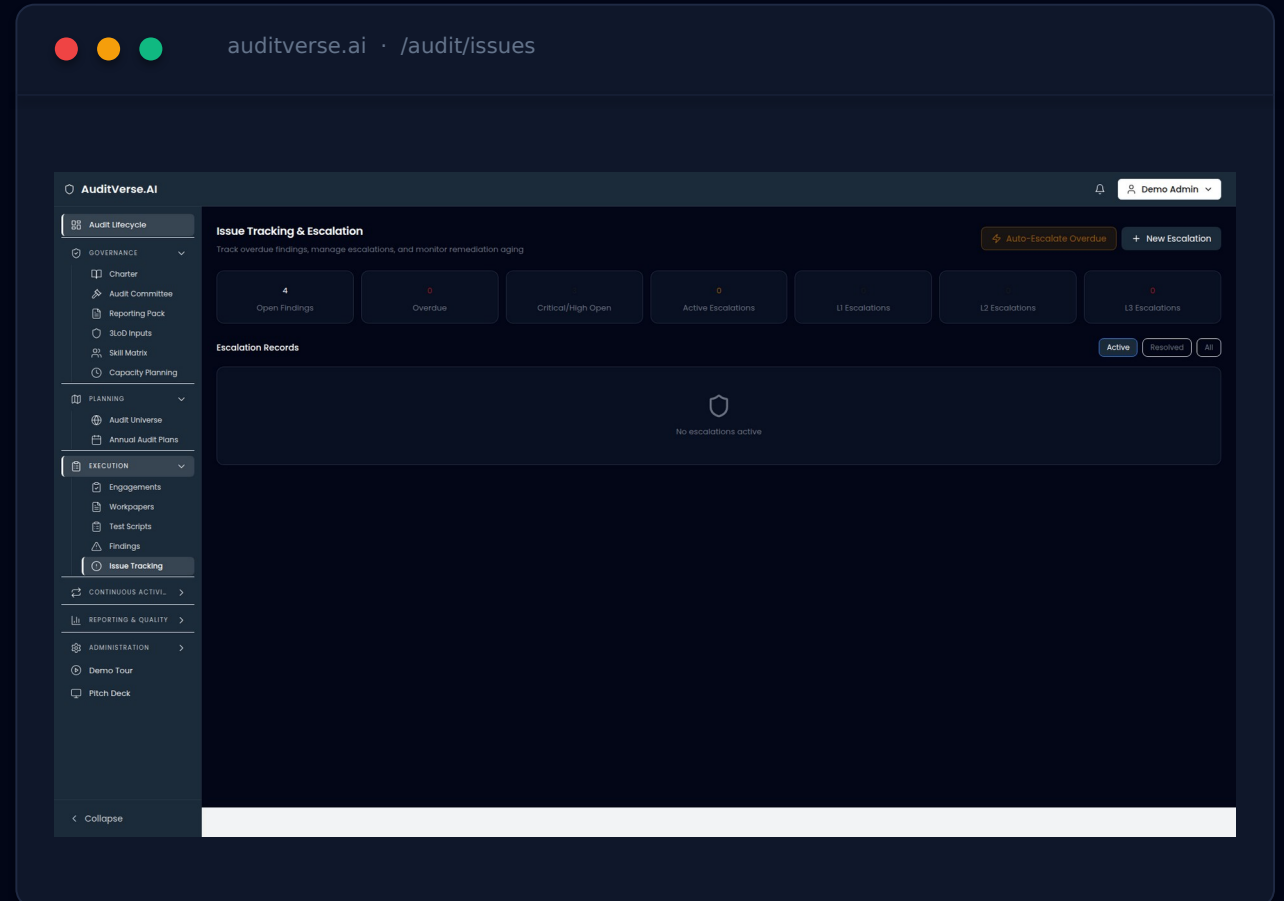

TODAY

Once a finding has a due date, ownership tracking ends. Overdue issues sit unresolved because no one knows whose desk they're on.

WITH AUDITVERSE.AI

Issues runs aging buckets, automatic 3-level escalation (reminder → manager → executive), and a single dashboard for everything overdue.

- Aging buckets: 0-30, 30-60, 60-90, 90+ days
- Auto-escalate from L1 → L2 → L3
- Daily digest to action owners
- Resolved-with-notes audit trail

Surveys & Self-Assessments

Pre-audit, post-audit, and CSA without SurveyMonkey.

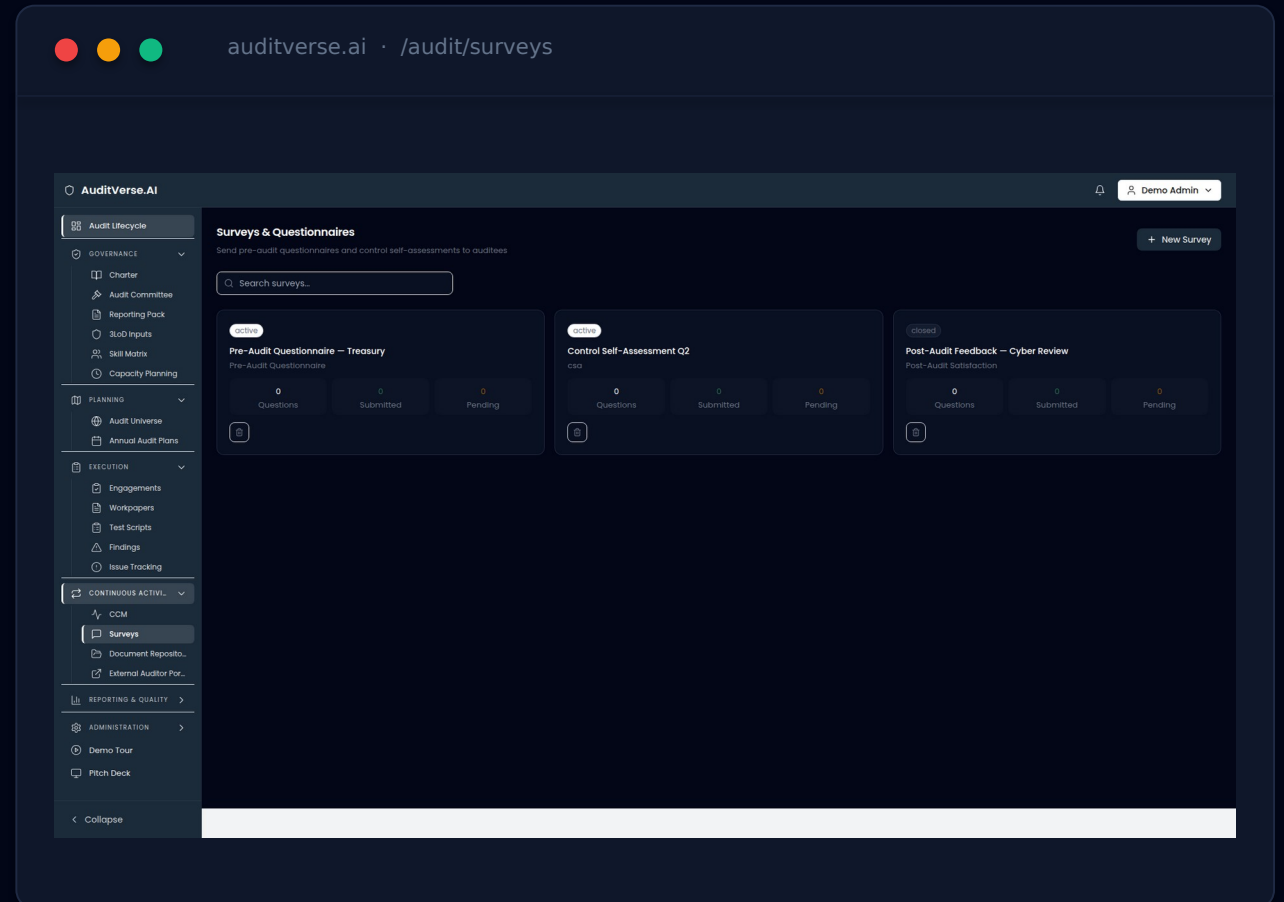

TODAY

Pre-audit questionnaires get sent in Outlook with a Word attachment. Responses arrive scattered, half complete, and need to be hand-tallied.

WITH AUDITVERSE.AI

Surveys lets the team build pre-audit, post-audit, and control self-assessment surveys — with AI question generation tied to the engagement scope.

- AI-generated questions from scope
- Pre/post-audit + CSA templates
- Email distribution + reminders
- Response dashboard + export

Document Repository

One place for evidence, working papers, reports, charters.

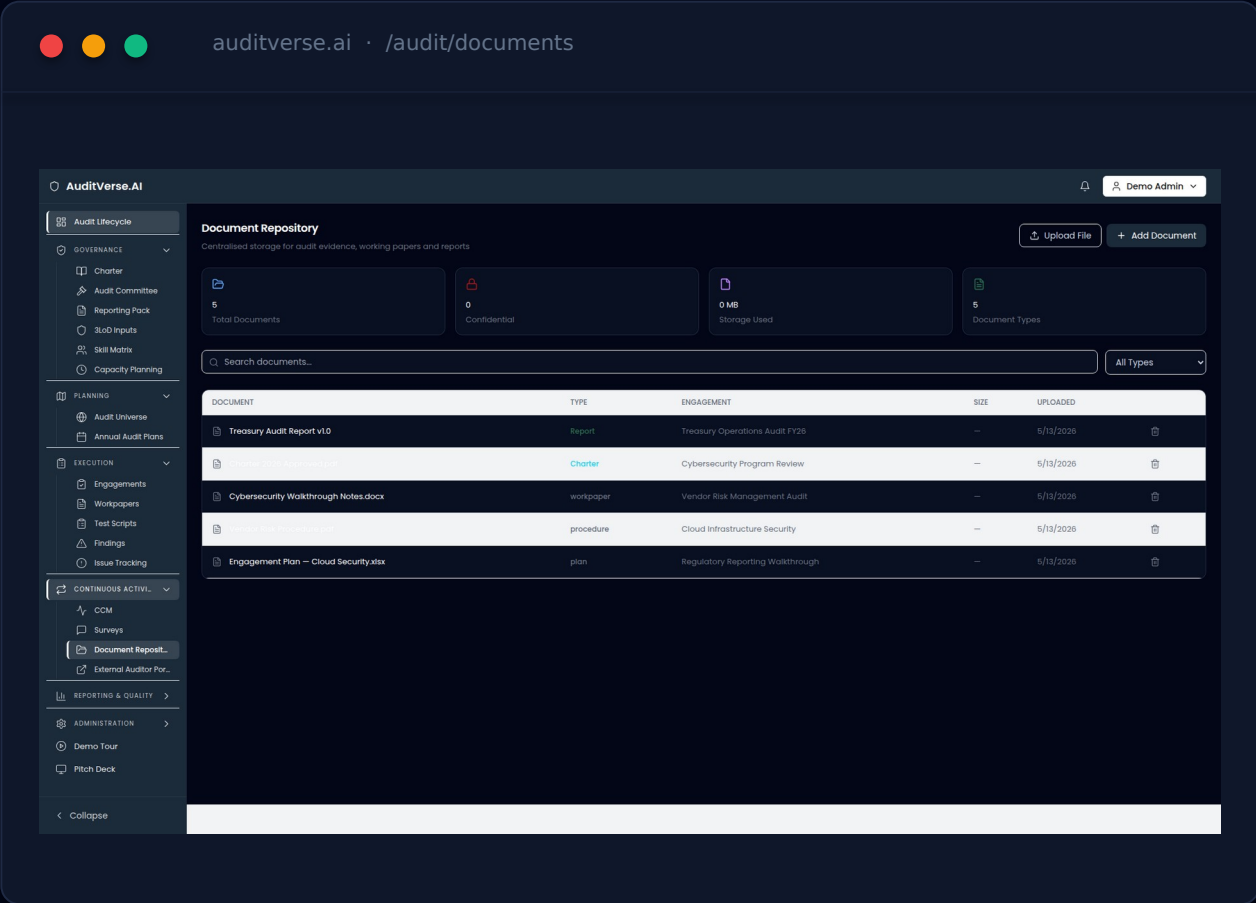

TODAY

Audit evidence lives in OneDrive, SharePoint, email and personal laptops. Confidentiality is enforced by hope. Retention is whatever default the drive has.

WITH AUDITVERSE.AI

Documents centralises every artefact with type, engagement linkage, confidentiality flag and full-text search — backed by the same access model as the rest of the platform.

- Tag by type, engagement, BU
- Confidentiality flag with access scope
- Full-text search across the corpus
- Linked to workpapers + findings

Audit Analytics

The numbers behind the assurance — not a quarterly slide.

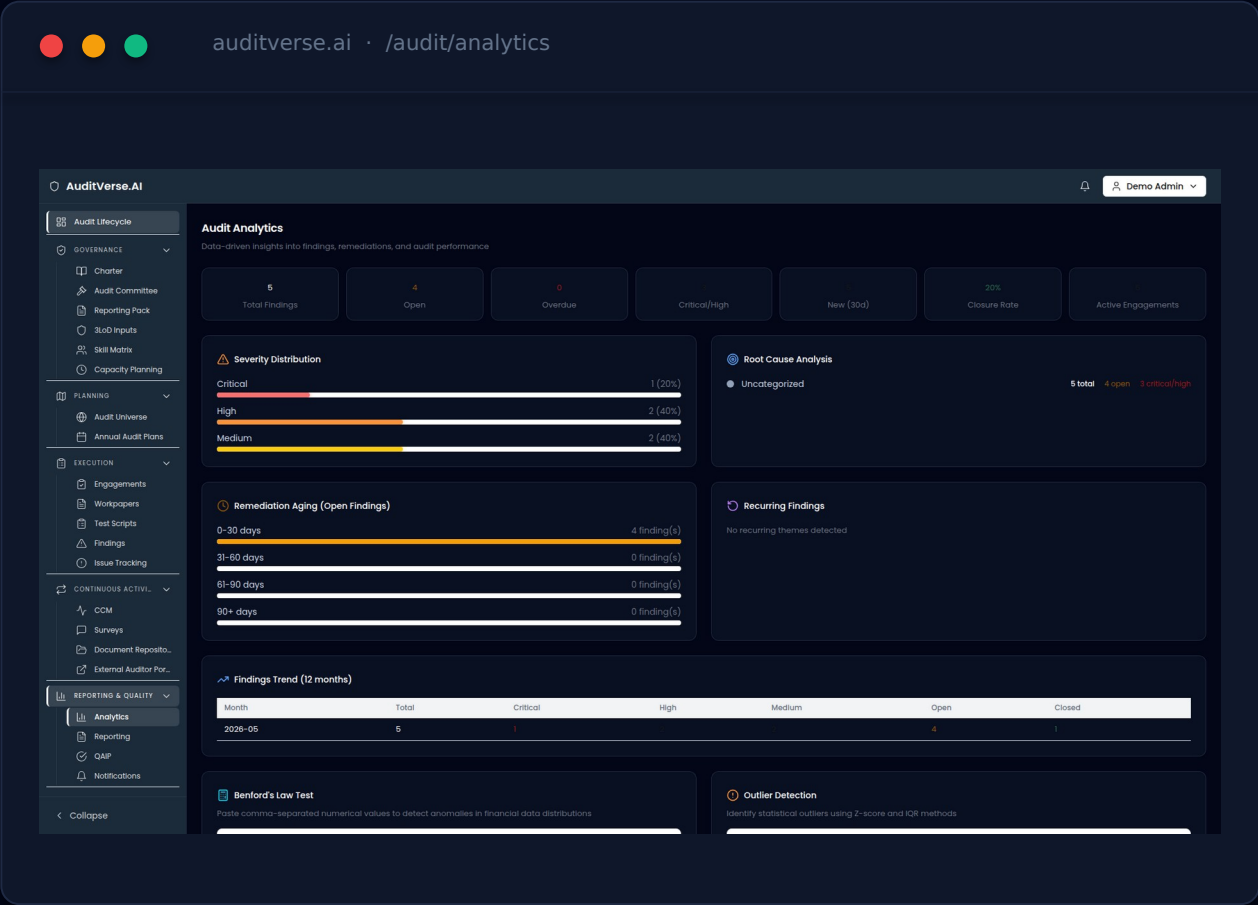

TODAY

Analytics today means rebuilding the same Excel pivot at the end of every quarter. Trends are guessed at; hard numbers arrive too late to act on.

WITH AUDITVERSE.AI

Analytics ships a live coverage / velocity / closure / aging dashboard, sliced by BU, engagement type and severity — with drill-through to underlying records.

- Coverage % by BU and risk tier
- Mean cycle time + closure rate
- Findings opened vs. closed by quarter
- Slice by severity, owner, theme

External Auditor Portal

Give Big-4 a workspace, not a Dropbox link.

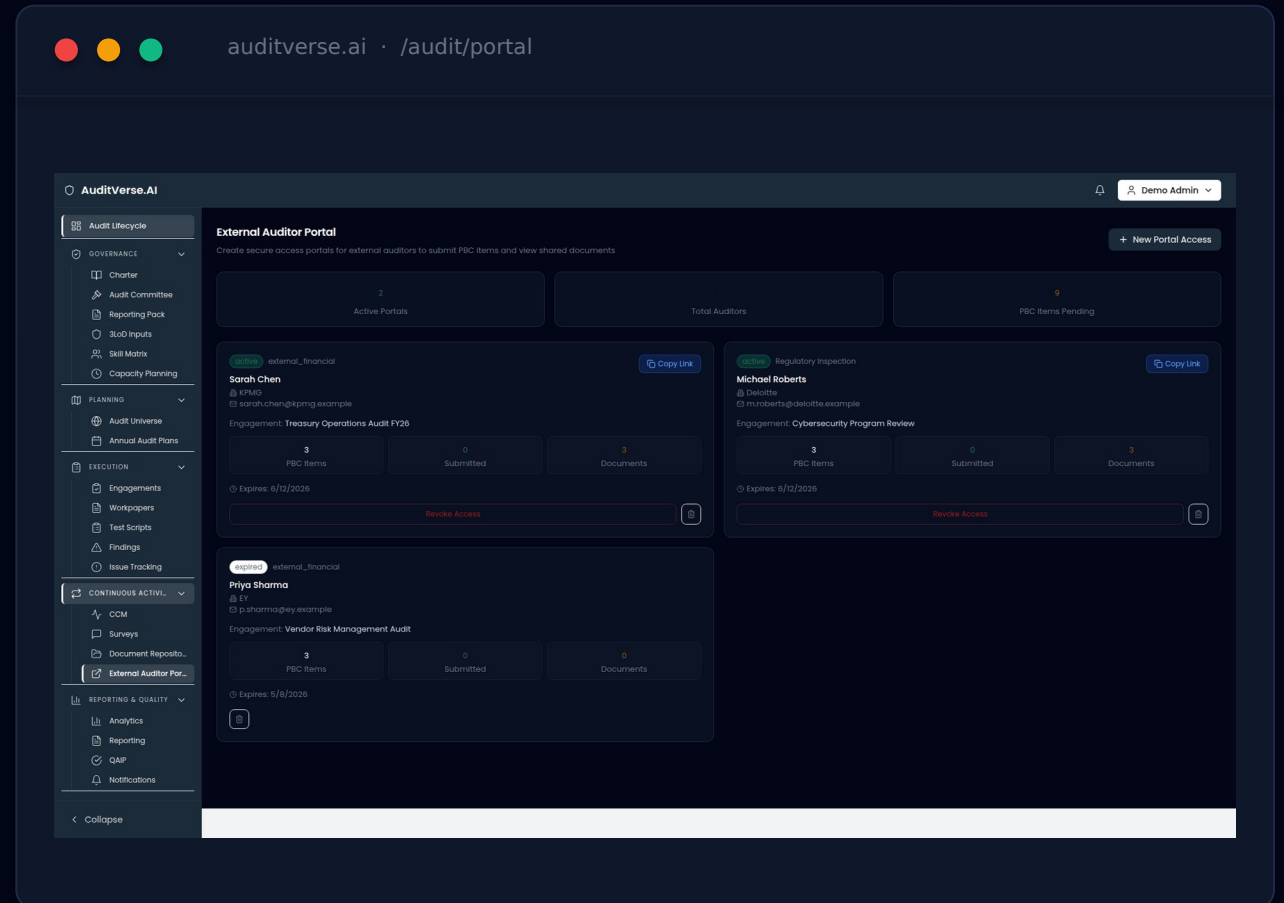

TODAY

External auditors get a shared folder and a user account that's hard to revoke. Read-only is enforced by access groups that nobody audits.

WITH AUDITVERSE.AI

Portal gives external teams scoped, expiring, read-only access to exactly the engagements / workpapers / findings they need — with full activity logging.

- Scoped to specific engagements
- Expiry date + auto-revoke
- Read-only with comment threads
- Full activity log per external user

Audit Charter

Living charter, versioned, approved.

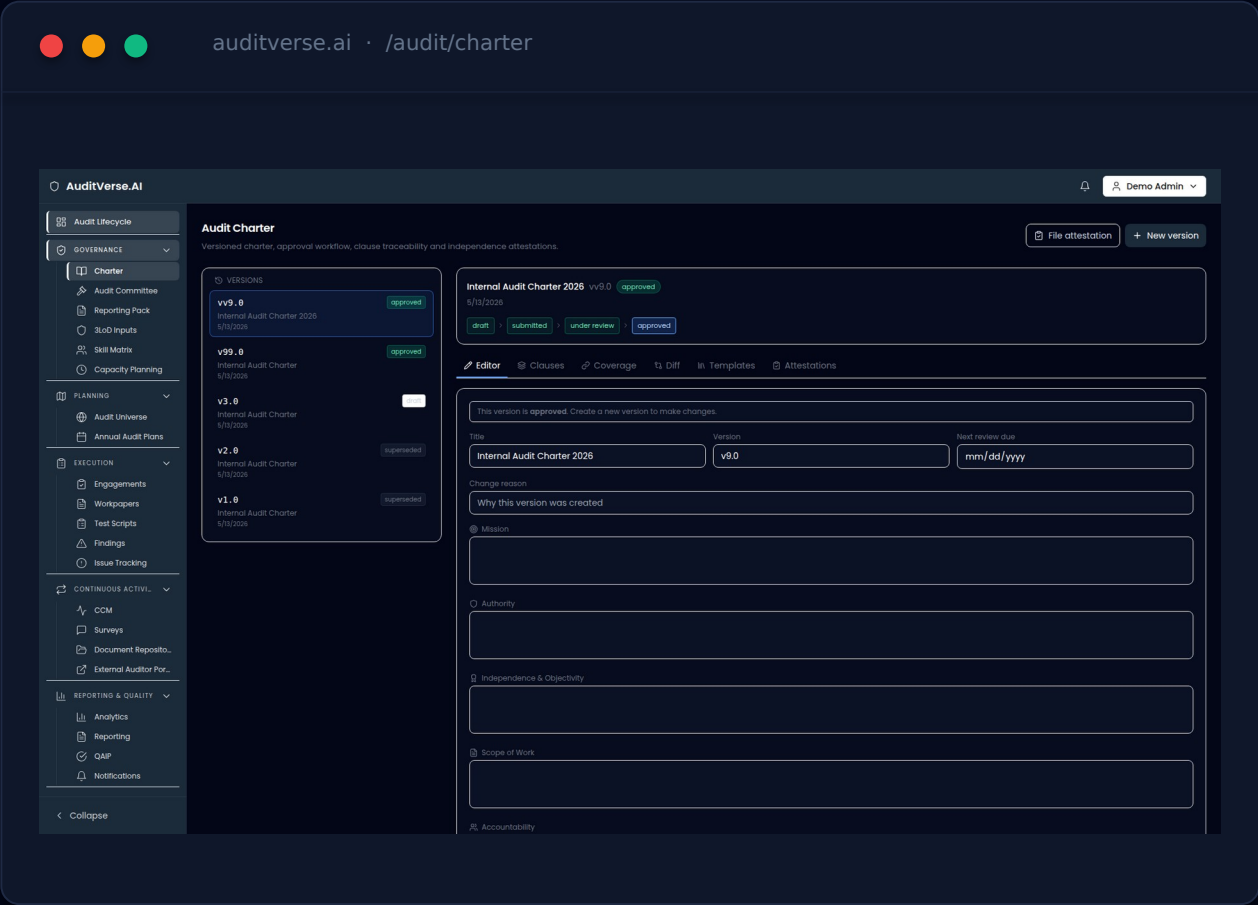

TODAY

The audit charter lives as a Word doc on the head of audit's laptop. Nobody knows which version is current. Committee approval is hunted in old minutes.

WITH AUDITVERSE.AI

Charter holds the current and historical charter documents, with AI-assisted drafting, version comparison, and committee approval workflow.

- AI drafting from IIA template
- Side-by-side version diff
- Committee approval workflow
- Linked from every engagement

Continuous Controls Monitoring

Daily controls testing, not annual snapshots.

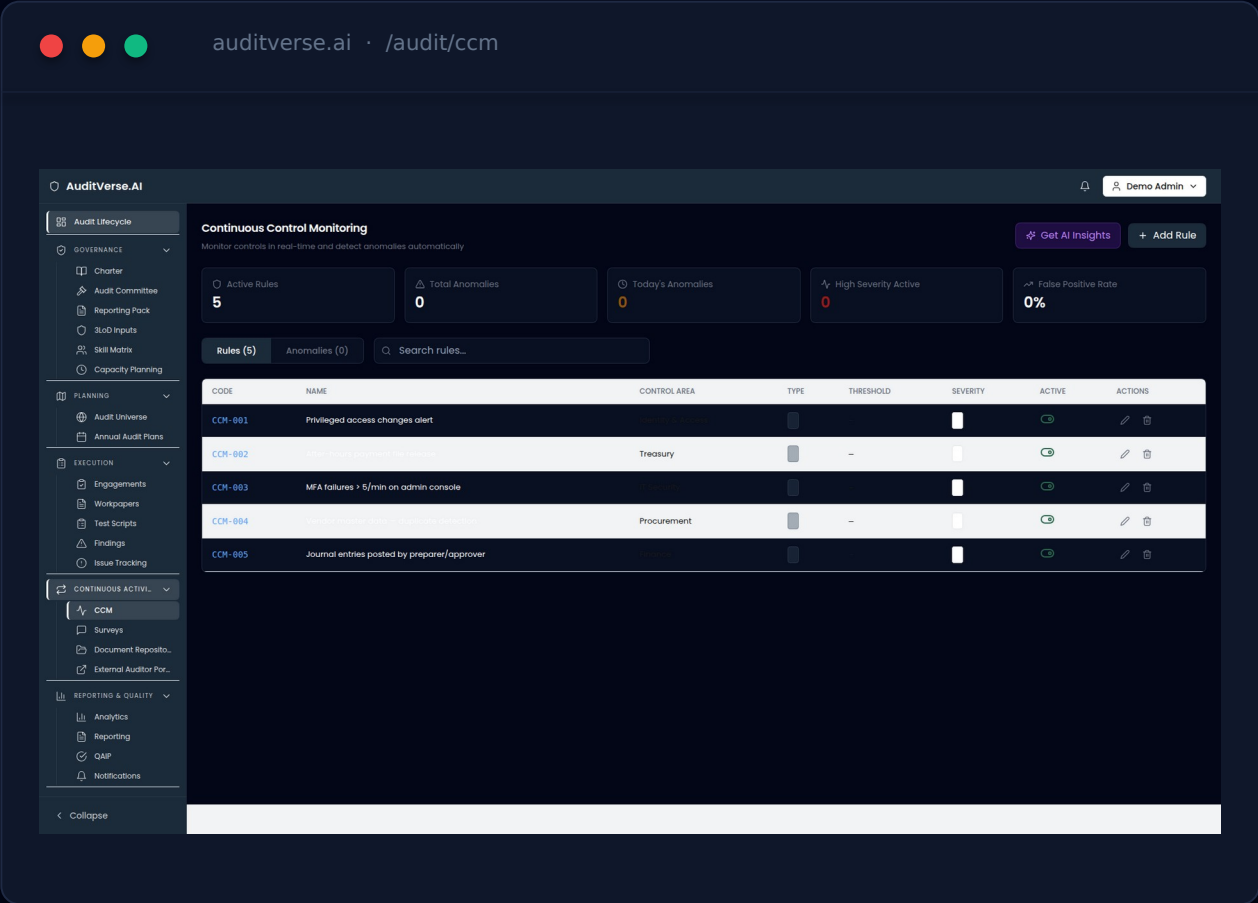

TODAY

Most controls get tested once a year on a sample. Failures between tests go undetected for months. Internal audit and SecOps don't share data.

WITH AUDITVERSE.AI

CCM runs scripted controls daily against source systems, surfaces exceptions, and feeds them into the audit findings backlog automatically.

- Scripted controls per framework
- Daily execution + alerting
- Exception → finding workflow
- Time-series view per control

Reporting

The committee pack writes itself.

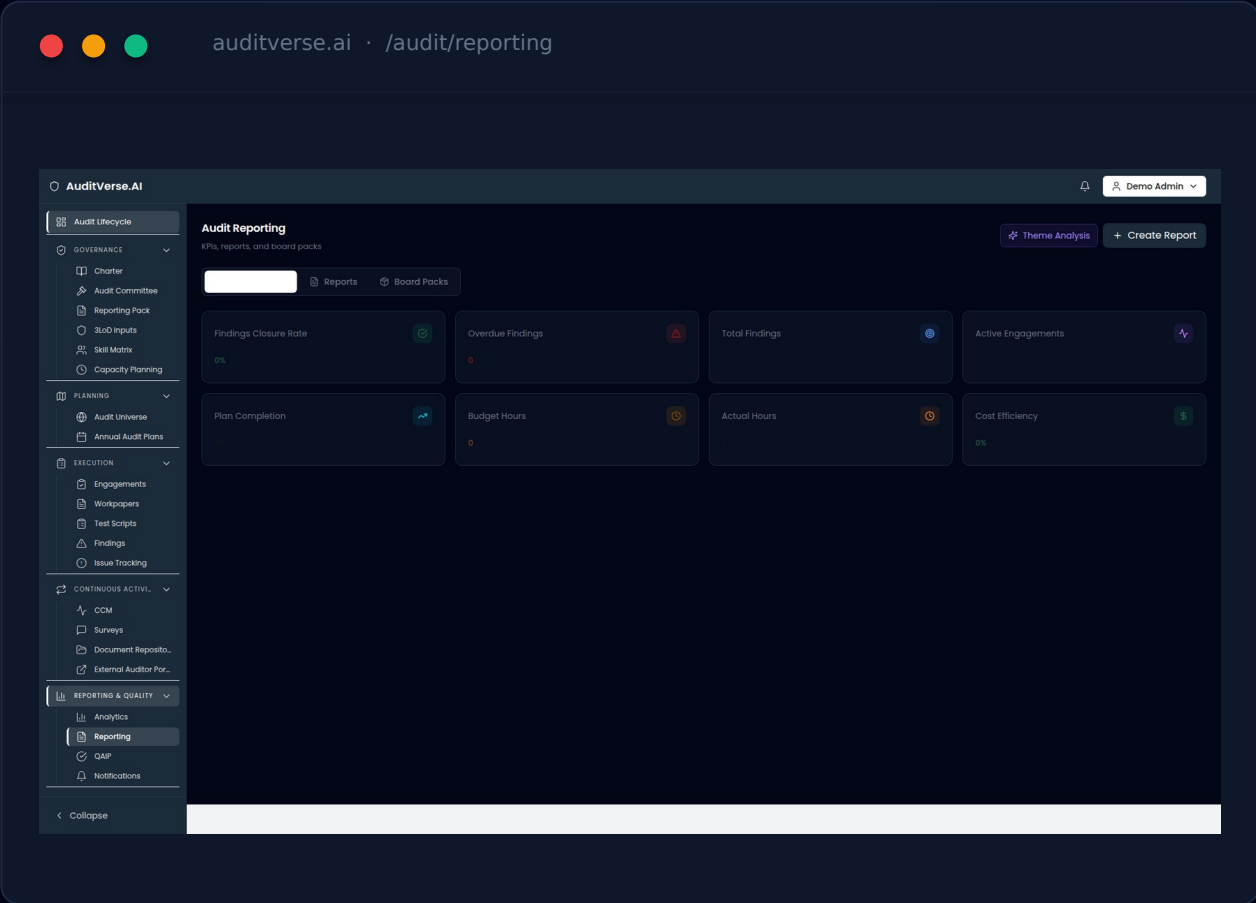

TODAY

Quarterly reporting is two analysts and a week of PowerPoint. By the time it's done, half the numbers are stale and the layout has drifted from last quarter.

WITH AUDITVERSE.AI

Reporting generates the committee pack from live data — heatmap, top findings, aging, coverage delta — in a branded template, in one click.

- Branded PDF, one-click export
- Auto-refreshed snapshots
- Drill-through to workpapers
- Historical pack archive

Quality Assurance & Improvement

IIA-aligned QAIP that runs itself.

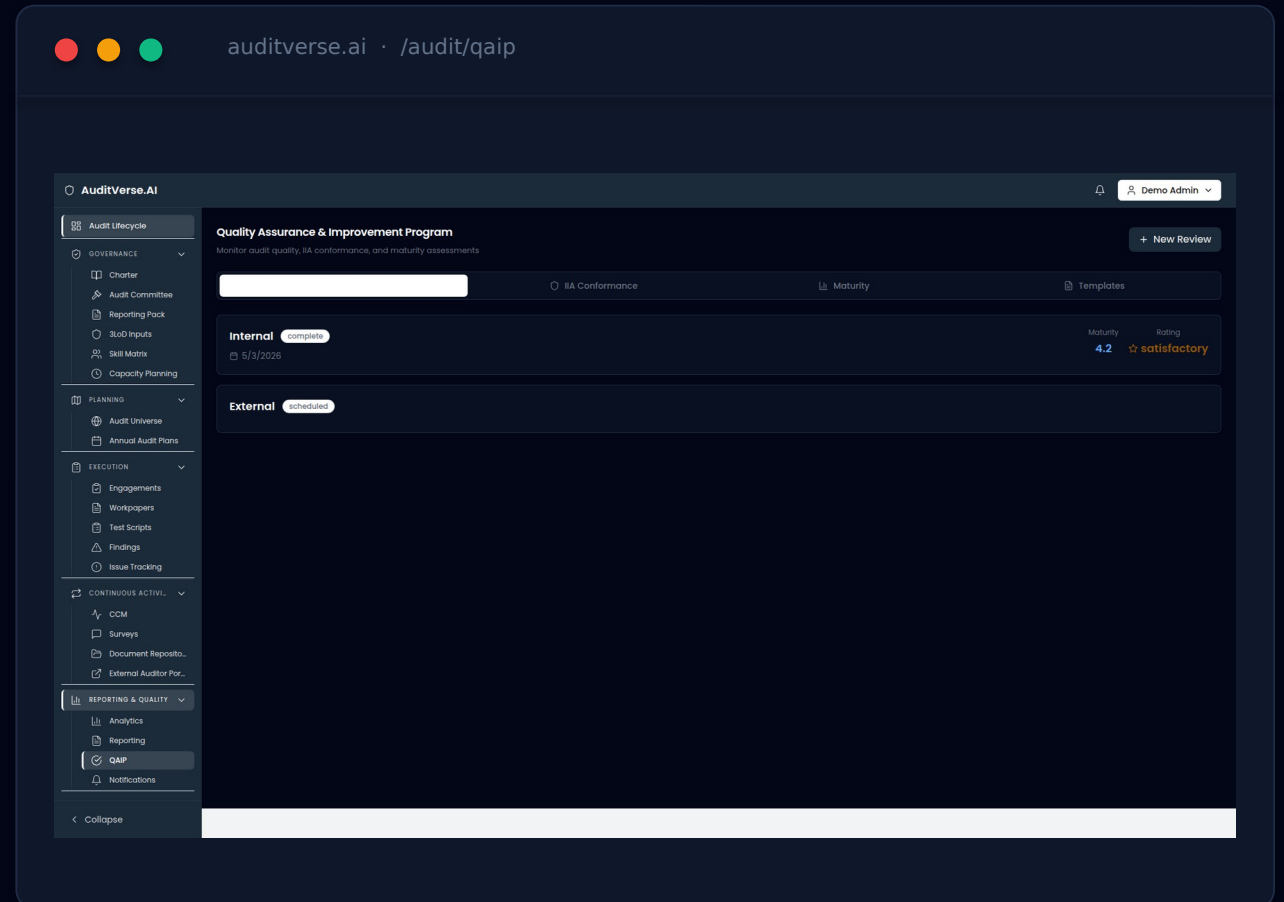

TODAY

QAIP is the program everyone agrees they need and nobody runs. Internal assessments are sporadic; external EQAs surface preventable findings.

WITH AUDITVERSE.AI

QAIP holds internal/external assessment cycles, KPI tracking against IIA standards, and the conformance evidence the committee needs.

- Internal assessment scheduling
- KPIs vs. target with targets visible
- External EQA history + actions
- Conformance statement export

TEST SCRIPTS

Test Script Library

184 reusable scripts. Cloned, not retyped.

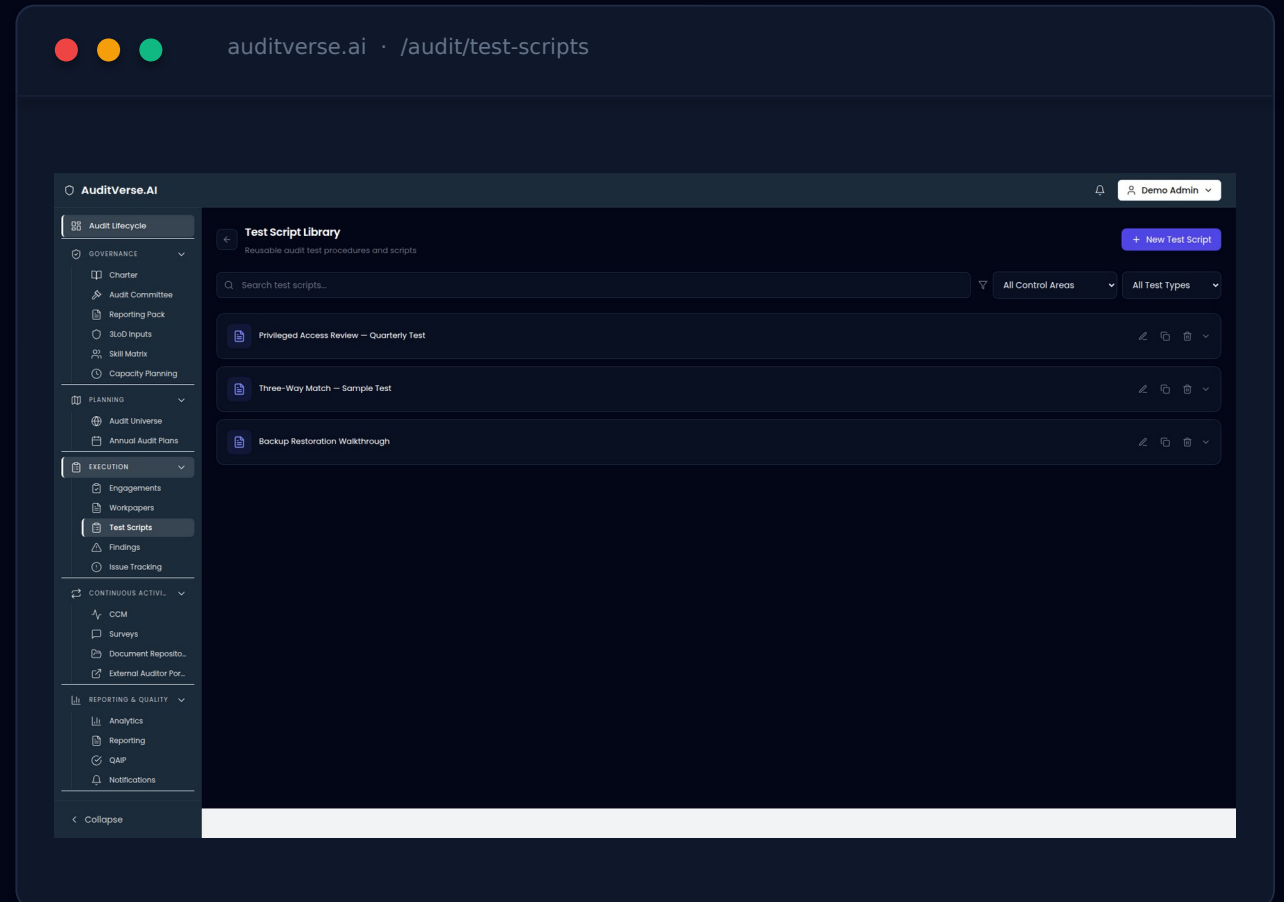

TODAY

Every engagement re-writes the same MFA test, vendor SOC2 check, and access recertification procedure from memory. Quality varies wildly.

WITH AUDITVERSE.AI

Test Scripts is a versioned library of reusable procedures, mapped to frameworks and categories, that auditors clone into a workpaper in two clicks.

- Versioned, peer-reviewed library
- Mapped to ISO, NIST, SOX, FATF
- Clone-to-workpaper in two clicks
- Category + framework filters

Skill Matrix

Match the right auditor to the right engagement.

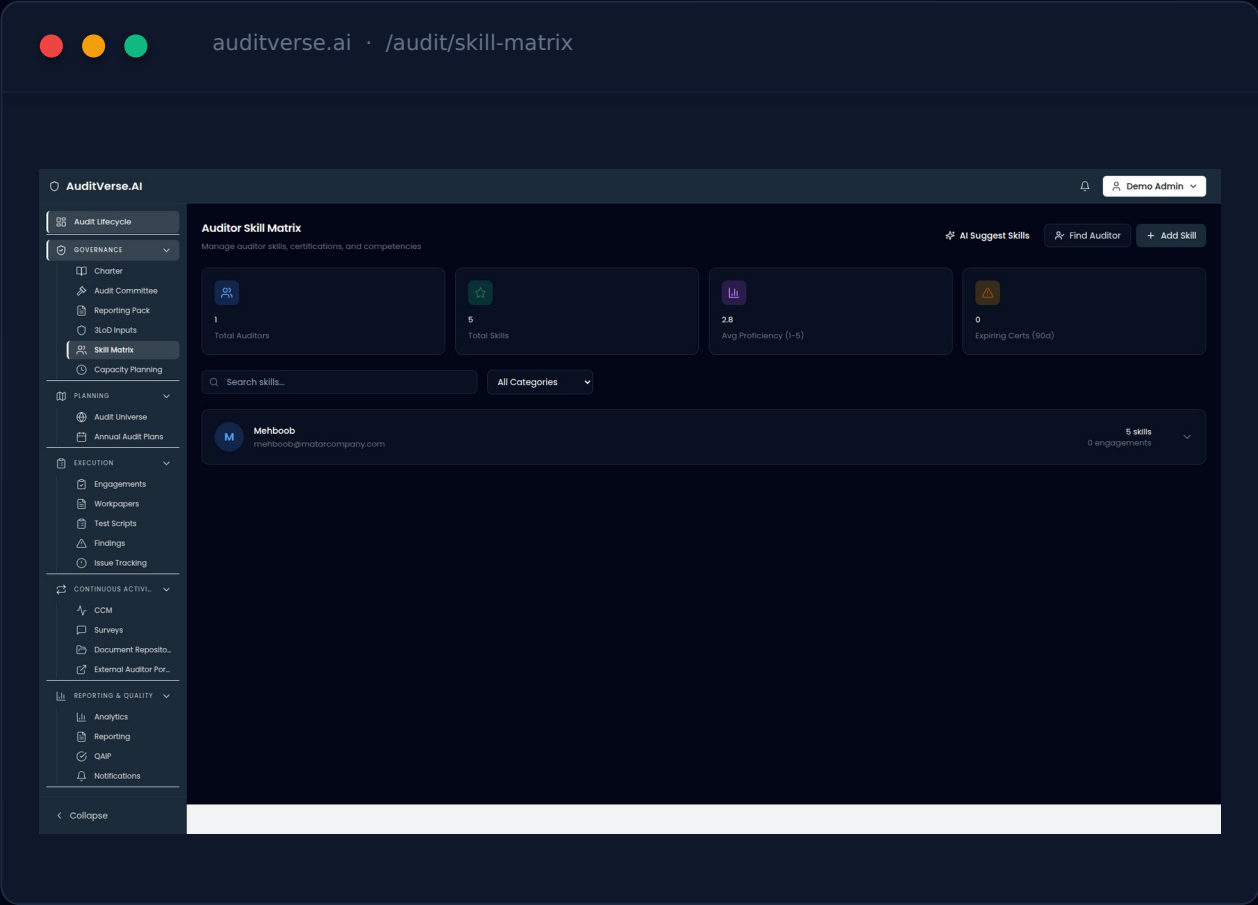

TODAY

Engagement staffing is done from memory. Junior auditors get put on cyber engagements they aren't ready for. Skills gaps surface only when work slips.

WITH AUDITVERSE.AI

Skill Matrix tracks every auditor's competency × seniority, surfaces team-wide gaps, and suggests staffing for incoming engagements.

- Competency × seniority heatmap
- Gap detection at team level
- Staffing suggestions per engagement
- Training-plan input

Capacity Planning

See over-allocation before it ships.

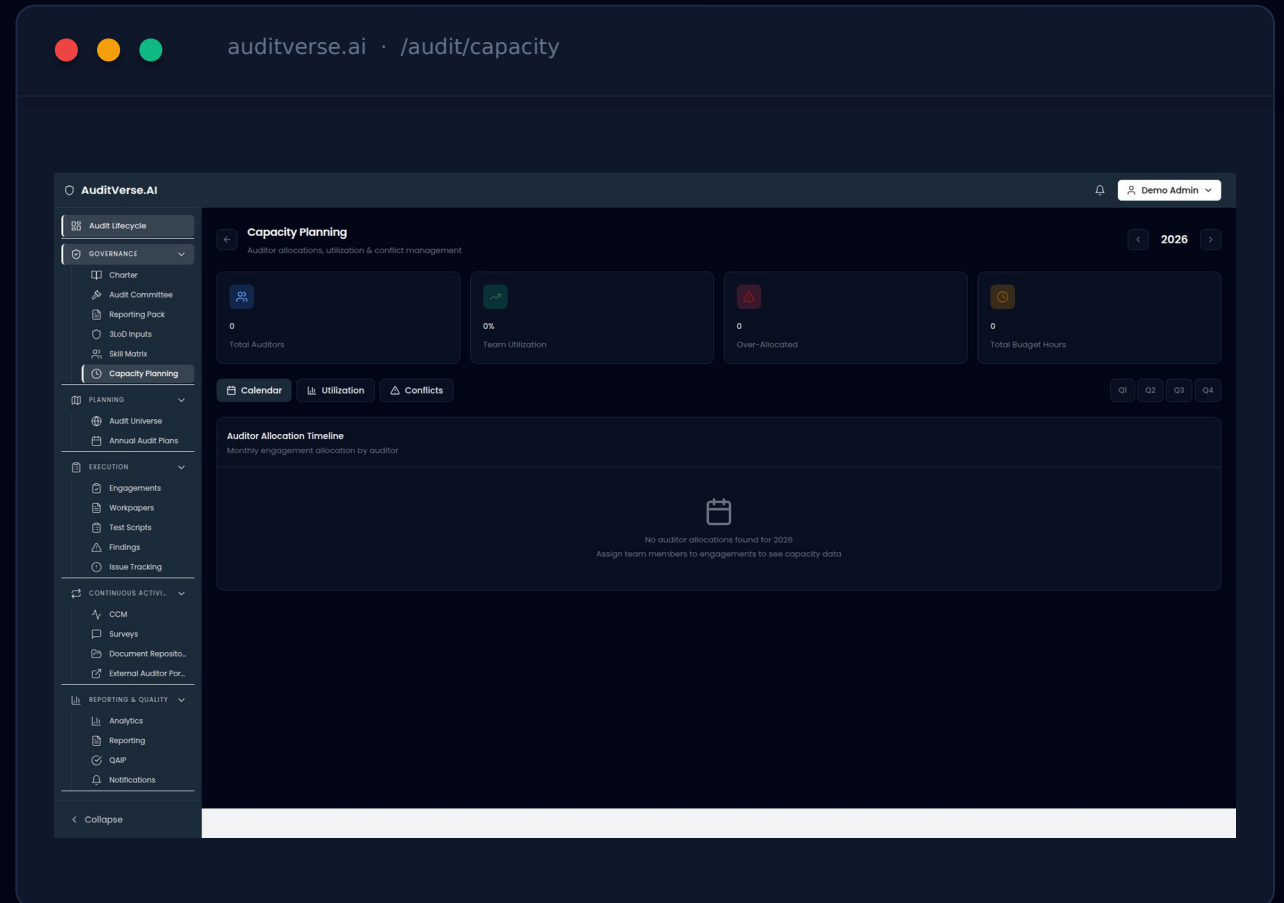

TODAY

Audit teams routinely commit to more hours than they have. The over-allocation surfaces in Q3 when something has to be deferred or descoped.

WITH AUDITVERSE.AI

Capacity reconciles planned engagement hours against auditor availability — daily, monthly, quarterly — and flags over-allocation before it bites.

- Hours planned vs. available
- Per-auditor utilisation
- Forecast 1-2 quarters ahead
- Replan or hire signal

What AuditVerse.AI means in numbers.

Indicative impact for a 12-person internal audit function.

WHAT MAKES THE NUMBERS HOLD			
AI scope drafting	CCCE structuring	Auto-escalation	Live committee pack
2-4 hrs / engagement back to the auditor	30 min / finding back to the lead	Issues never sit > 30 days in silence	0 prep weeks per quarter

NEXT STEPS

Let's run your next audit on AuditVerse.AI.

90-minute pilot scoping. We bring 2 reference engagements; you bring your real universe and a recent finding.
